

TAMÁS KOÓS

Frontend Developer

PROFESSIONAL EXPERIENCE

October 2021 - present: Frontend Developer (EPAM Systems)

I worked with one of the world's largest investment advisory firms on a retirement investment optimizer software and a related but independent component library. We worked in a small team (3 people), while also providing support to the teams (~50 people, international) using said library. Being a small group, we did the entire workflow of development ourselves, from design to implementation and testing.

July 2018 - September 2021: Frontend/Android Developer (Applion Computer)

I was involved in the development of a 12-person startup's own FSM software, Angular 10-based web admin interface (75%) and Java-based Android client application (20%), both independently and as part of a team. Occasionally I also helped with the implementation of new features and support for existing functions on the Spring Boot-based backend component (5%).

SOFT SKILLS

- Excellent oral and written communication (including English)
- Continuous learning and development capacity
- Analytical, systematic thinking
- Ability to work independently and in a team
- Perseverance and determination
- Flexibility in space and time
- Fast and efficient problem solving
- Respecting the importance of workplace etiquette

HIGHER EDUCATION

2016 – 2021: ELTE Faculty of Informatics

Computer Science Bsc (4)

TECH STACK
